

What's the difference between HSU Wireless and HSU Wireless-Secure?

The two wireless networks operate at the same speed and have the same coverage. The primary difference is that HSU Wireless-Secure encrypts wireless data between you and the wireless access point, which enables faculty, staff, and graduate students to make use of additional campus wireline resources such as department shares and printers. Access to HSU Wireless is quick and simple to set up; HSU Wireless-Secure requires that you install certificates and other security measures to your device before you are permitted to connect.
