

Introducing myReports - the new approach to OBI data extraction

The Data Warehouse team at HSU is deploying the first stage of the new myReports project, designed to enable staff and faculty to extract information from PeopleSoft using Oracle Business Intelligence (OBI), the university's comprehensive environment for organizing, analyzing and presenting data. myReports provides information that is up-to-date, accurate, consistent, and easy to access, which in turn enables staff and faculty to more effectively set priorities and understand the potential impact changes in priorities may have on individuals, groups, and the campus as a whole.

The first category of myReports to be available are student reports, initially Admission and Recruiting Admission Application, Census, and Student Records Term Enrollment. Additional reports, along with myReports for Human Resources and myReports for Finance, will be announced as they become available.

You'll find more information on myReports and the benefits it is expected to bring to the campus on the [myReports service page](#).
