

HSU Wireless network may ask you to re-authenticate your device

Last Updated: September 11, 2013 - 3:59pm

System: Wireless Network

Status: Maintenance Window

Issue start: Sep 12 2013 - 06:00

Estimated resolution time: Sep 12 2013 - 07:00

Who is affected: About 1800 devices out of 11000 using HSU Wireless

Affected in what way: The wireless system may ask you to re-authenticate using your HSUID and password.

Workaround: None.

What happened: Due to exponential growth of devices using the campus wireless network, 4 of the 28 IP subnets in our access pool have exhausted all available IP addresses, which may lead to new devices being unable to connect if no action is taken immediately. Network Engineering will be purging all leases from the affected subnets to ensure the usability of the wireless network until additional capacity can be added this weekend.
